Ageing in the Asia-Pacific Region: Issues, Policies and ...

Population ageing in Asia and the Pacific is occurring at an unprecedented pace, due to rapid decreases in fertility rates and increases in life expectancy. The age group of older persons, defined as those 60 years or older, is the only age cohort which is still growing in Asia and the Pacific.

Ageing Societies | United Nations ESCAP

Women tend to live longer than men, resulting in a larger number of older women than older men, constituting the majority (53.5%) of the population aged 60 or older in the Asia Pacific. In 2012, for every 100 women aged over 60 in Asia, there were just 90 men. The proportion of women also rises further with age.

Population ageing | Help Age Asia

More than 211 million people aged 65 and older lived in East Asia and Pacific in 2010 – including 130 million in China alone – accounting for 36 percent of the global population in that age group. And the region is aging rapidly. Between 2015 and 2034, the older population will grow by about 22 percent every five years in East Asia.
