Labour Constants In Construction
Labour constants may be roughly defined as a guide of "how much work someone can do in how much time". In reality, this is not an exact science and requires considerable experience, skill, intuition, historic data and some practical application & risk to define and to implement. There will be variations from project to project, site to site, sub-contractor to sub-contractor … and these can be considerable.

Labour Constants – Cost Planner
The cost of construction project highly depends on the requirements of labor for various activities during construction. There are direct and indirect costs associated with the labor. They are the salary of labors, their accommodation, food, insurance cost etc. Thus it is essential to understand the number labors required for each activity of the construction […]

Divide 5 minutes by 60 minutes – this will give you a labour constant of 0.08/m² of plasterboard. Multiply the measure (100 m²) by the constant (0.08/m²) to calculate your labour requirement in hours – 100 × 0.08 = 8 hours. Materials measurement and labour measurement are the first building blocks for pricing a job effectively.
