Cryogenic Mixed Refrigerant Processes International ...

Mixed refrigerants were first employed in large scale cryogenic systems, particularly in the liquefaction of natural gas. More recently, significant work has been done in using mixed refrigerants in small cryocoolers. Mixed refrigerant cycles are the subject of extensive ongoing research.

Dual mixed refrigerant (DMR) process. Dual MR processes are offered by Shell and APCI. The Shell process has been proven in Sakhalin, while the APCI process has been qualified by most major international oil companies. This process uses two separate MR cooling cycles—one for precooling the gas and one for final cooling and liquefaction.
