Harley Davidson Water Cooled Engine

Some people might assume that the term “liquid-cooled” refers to a full-blown, water-cooled engine, but Harley’s so-called Twin-Cooled power plants use both oil and water for thermal relief, applying coolant only to the cylinder heads (which leaves the engine block cooled by oil and air), and focuses the cooling effort towards the hottest part of the heads: the exhaust valves.

Liquid Cooled 2014 Harley-Davidsons: 6 Things to Know

Harley-Davidson made some waves at EICMA this week, showing off two models it teased in 2018, the Pan America adventure tourer and the Bronx streetfighter. Both are powered by a new liquid-cooled...

Harley Releases Details On Revolution Max Engine, Pan ...

With extreme ease of access and the simplicity of the procedure, Harley has made it an easy transition to liquid cooling its power plant. Not only is it a snap to check/add coolant to these bikes,

Harley has done an excellent job of hiding the fact that there is a cooling system on the bike.

Keeping Your Liquid-Cooled Harley... Cool! | Baggers

When Harley launched the 2014 model range this week they introduced a new Twin-Cooled 103 and 110 engine to the range. By Twin-Cooled they mean that water and coolant is used to cool the heads near the exhaust ports where most of the heat is generated. It seems this has largely been done for rider comfort and to pass tough new emissions laws.

Harley Twin-Cooling explained - Motorbike Writer

Twin-Cooled Milwaukee-Eight 114 (114 cubic inches, 1,870cc) with liquid-cooled cylinder heads for the CVO Limited and CVO Street Glide models Compared to the Twin Cam 103 and 110, the Milwaukee-Eight's increased displacement, higher compression ratio and four-valve cylinder heads, which provide 50 percent more intake and exhaust flow capacity, result in 10 percent more torque across the board.
