Estradiol, progesterone and testosterone are hormones found in humans in varying amounts. These hormones are responsible for regulating sexuality in males and females, as well as growth and the reproductive cycle. Trenbolone, zeranol and melengestrol acetate are chemical hormones that are man-made for cattle.

Are Hormones in Meat Affecting Humans? | Healthfully

These comprise the "classical" steroid sex hormones, oestradiol-17β, testosterone and progesterone. The two former are used either in the free form or as esters, mainly those of propionic or benzoic acid. Esterification generally causes prolongation of the half-life of the compounds in the body by 40 to 50%.

hormones in animal production - Food and Agriculture ...

Hormones control functions such as water retention, growth, metabolism, weight and reproductive functions. More than 20 main hormones are released and the major glands are the pituitary gland, hypothalamus, reproductive glands, thyroid, parathyroid, adrenal and pineal gland. The focus of this article is the endocrine system's role in ...

The endocrine system's role in cow reproduction ...

This suboptimal reproduction may be reduced by understanding the basic mechanisms or hormones that control the release of reproductive hormones from the hypothalamus and anterior pituitary gland. We will antagonize the putative hormone controlling the release of reproductive hormones either by delivering a specific anatanogist or by restricting the amount of feed given to the animals.
