XHTML is HTML defined as an XML application; XHTML is supported by all major browsers; Why XHTML? XML is a markup language where all documents must be marked up correctly (be "well-formed"). XHTML was developed to make HTML more extensible and flexible to work with other data formats (such as XML).

HTML Versus XHTML - W3Schools
XHTML acts as an application from the XML family, and is a more restrictive subset of SGML. As a result of the well formed nature of XHTML documents, it is possible for them to be parsed using an XML parser – which further differentiates XHTML from HTML. An XML document is comprised entirely of characters found in Unicode.
