Key to Psathyrella and related species - Fungipedia

Psathyrella is a large genus of about 400 species, and is similar to the genera Coprinellus, Coprinopsis, Coprinus and Panaeolus, usually with a thin cap and white or yellowish white hollow stem. The caps do not self digest as do those of

Read Free Key To Psathyrella And Related Species

Coprinellus and Coprinopsis. Some also have brown spores rather than black. These fungi are often drab-colored, difficult to identify, and all members are considered inedible or worthless (for eating) and so they are oft overlooked.

Psathyrella - Wikipedia

The border line
between Psathyrella

Read Free Key To Psathyrella And Related Species

and Panaeolus has always been confusing, even before contemporary DNA studies (see the linked page for more information), and we are learning that some species of Psathyrella are more closely related to coprinoid mushrooms in the genera Coprinellus and Coprinopsis than they are to some other species of Psathyrella. For more information
