Logic has been called "the calculus of computer science". The argument is that logic plays a fundamental role in computerscience, similar to that played by calculus in the physical sciences and traditional engineering disciplines. Indeed, logic plays an important role in areas of Computer Science as disparate as artificial intelligence (automated

logic or is a consequence of a set of formulas. One of possible ways of providing such tools is to define suitable proof systems.

Traditionally proof systems are often used to define new logic instead of defining them via semantics. Then one immediately obtains tools for proving the validity of formulas.
