Definition. In what follows,  $F$  will denote a field of either real or complex numbers. Let  $M_n(F)$  denote the vector space of all matrices of size  $n \times n$  (with rows and columns) with entries in the field  $F$ . A matrix norm is a norm on the vector space  $M_n(F)$ . Thus, the matrix norm is a function  $\|\cdot\|: M_n(F) \rightarrow \mathbb{R}$  that must satisfy the following properties: . For all scalars  $\alpha \in F$  and for all matrices  $A, B \in M_n(F)$ ,
