multi-step Claus process recovers sulfur from the gaseous hydrogen sulfide found in raw natural gas and from the by-product gases containing hydrogen sulfide derived from refining crude oil and other industrial processes.

Introduction to modern petroleum refining processes

Read PDF Modern Petroleum Refining Processes By B K Bhaskara Rao

Refining breaks crude oil down into its various components, which are then selectively reconfigured into new products. Petroleum refineries are complex and expensive industrial facilities. All refineries have three basic steps: Separation; Conversion; Treatment; Separation. Modern separation involves piping crude oil
