Naming Chemical Compounds Worksheet Cavalcade

1) Ionic compound names consist of two words. The first word is the name of the cation (the first ion) and the second word is the name of the anion (the second one). First word: naming the cation: The cation is the first thing in the chemical formula. Here's how you figure out what word to write down to identify it:

Naming Compounds - Part 2 - YouTube:
This video explains how to use a chemical name to write the formula for that compound. Naming Acids and Bases
Acid names are based on the anion they form when dissolved in water; base names follow the rules for ionic, organic, or molecular compounds.

Naming ionic compound with polyvalent ion. Worked example: Finding the formula of an ionic compound. Practice: Predict the charge on monatomic ions. Practice: Naming ionic compounds. This is the currently selected item. Practice: Find the formula for ionic compounds.

Naming ionic compounds (practice) | Khan Academy

Build the name. For a two element ionic compound, the naming is simple. The first part of the name is the name of the metal element. The second part is the name of the nonmetal element, with the suffix “-ide.” Here are some examples: Al_2O_3 . Al_2 = Aluminium; O_3 = Oxygen. So the name would be “aluminium oxide.” FeCl_3 .

Naming Ionic Compounds Using -ous and -ic . Although Roman numerals are used to denote the ionic charge of cations, it is still common to see and use the endings -ous or -ic. These endings are added to the Latin name of the element (e.g., stannous/stannic for tin) to represent the ions with lesser or greater

IUPAC Rules for Nomenclature. The naming of substituted cycloalkanes follows the same basic steps used in naming alkanes. Determine the parent chain. Number the substituents of the ring so that the sum of the numbers is the lowest possible. Name the substituents and place them in alphabetical order.

4.2: Naming Cycloalkanes - Chemistry LibreTexts

Long before chemists knew the formulas for chemical compounds, they developed a system of nomenclature that gave each compound a unique name. Today we often use chemical formulas, such as NaCl , $\text{C}_{12}\text{H}_{22}\text{O}_{11}$, and $\text{Co}(\text{NH}_3)_6(\text{ClO}_4)_3$, to describe

chemical compounds. But we still need unique names that unambiguously identify each compound.

Nomenclature - Purdue University

Ionic compounds are neutral compounds made up of positively charged ions called cations and negatively charged ions called anions. For binary ionic compounds (ionic compounds that contain only two types of elements), the compounds are named by writing the name of the cation first followed by the name of the anion. For example, KCl, an ionic compound that contains K^+ and Cl^- ions, is named ...
