Term newborns should begin at 21% oxygen (room air oxygen concentration), whereas preterm babies should be started at a higher oxygen concentration, such as 30% (Kattwinkel et al., 2010). Unfortunately, high concentrations of oxygen are toxic to lung tissue, especially in preterm neonates.

## **NRP Study Guide - National CPR Association**

For example, if an examiner is assigned a TY 2013 return for examination and did not examine an NRP return for the TY 2012, 2011 or 2010 studies, they would be considered a new NRP examiner. If the examiner is assigned a TY 2013

Coordinate chest compressions with ventilations at a ratio of 3:1 and a rate of 120 events per minute to achieve approximately 90 compressions and 30 breaths per minute. Administer epinephrine if the heart rate remains <60 bpm despite 30 seconds of effective assisted ventilation and circulation (chest compressions).
