nuclear weapon | History, Facts, Types, & Effects | Britannica

How they work Nuclear weapons are manufactured principally from highly enriched uranium or plutonium. Early nuclear weapons, including the types exploded in warfare in Japan in 1945, employ the principles of nuclear fission to create a chain reaction in a critical mass of either enriched uranium or plutonium. In the simplest design, the ‘gun assembly’, [...]

Nuclear weapons | Nuclear Information Service

A nuclear weapon (also called an atom bomb, nuke, atomic bomb, nuclear warhead, A-bomb, or nuclear bomb) is an explosive device that derives its destructive force from nuclear reactions, either fission (fission bomb) or from a combination of fission and fusion reactions (thermonuclear bomb).Both bomb types release large quantities of energy from relatively small amounts of matter.

Nuclear weapon - Wikipedia

In today’s information age, the coexistence of nuclear weapons with advanced conventional weapons and information-based concepts of warfare is a military contradiction. Nuclear deterrence was initially predicated on geopolitical, military, and technical assumptions.
