Politics of Himalayan River Waters: An Analysis of the ...

India's new water policy has to recognise the need for deep scientific knowledge of the climate process in the Indian Himalayan Region (IHR). The larger Himalayan region is known as the water tower of Asia. The IHR is a part of it, and also includes most parts of the north-eastern states and hill areas of West Bengal.

Himalayan rivers must be lynchpin of India's new water ...

The book also studies water issues in China. Though the country is not a part of the Himalayan South Asia, most of the major rivers of this region originate in China. Over the years, China has been alleged by countries like India for diverting, choking or using the trans-boundary river waters for its purpose.

95 Nguyen, Mekong River, pp. 207-216. 96 Osborne. “Water Politics of Southeast Asia,” pp. 11-16; Gunn and McCartan, “Chinese Dams and the Great Mekong Floods of 2008,” p. 6 note that China's emphasis for the Mekong is now changing from transport to energy. 97 Osborne, “Water Politics,” p. 14.

The Great Himalayan Watershed: Water Shortages, Mega ...

The book looks into the domestic water issues and disputes in the Himalayan South Asian countries, and based on it analyzes trans-boundary water disputes. Himalayan South Asia comprises India, Pakistan, Bangladesh, Nepal, Bhutan, and Afghanistan. All except Afghanistan share river waters with India.

Water Issues in Himalayan South Asia | Bookshare

Himalayas - Himalayas - Drainage: The Himalayas are drained by 19 major rivers, of which the Indus and the Brahmaputra are the largest, each having catchment basins in the mountains of about 100,000 square miles (260,000 square km) in extent. Five of the 19 rivers, with a total catchment area of about 51,000 square miles (132,000 square km), belong to the Indus system—the Jhelum, the Chenab ...

detailed model of a whole Himalayan river system (the inter-linked Beas and Sutlej catchments) in northern India using a wide range of field and satellite observations to make it as accurate as possible. The model shows how climate change, land-use change and population growth will affect water resources in a range of scenarios.

Mapping water security in the Himalayan river basin

Melting Himalayan glaciers forming thousands of lakes, but not all water drains downstream The contribution of glacier meltwater to river flow cannot be sustained over long periods of glacier shrinkage. That means river flow in SE Asia will soon be at risk.
