two factors: density and buoyancy. However, at this level, students do not need to explain why objects sink or float. They are rather to be encouraged to observe that the same objects will sink or float every time, i.e., that there is consistency in the way the objects behave.

Lesson

Brainstorm as a class the properties of objects that float and objects that sink, and record on a chart. Introduce the word density to describe the differences. Whether an object sinks or floats depends on the density of the object in relation to the water. The heaviness of an object compared to its size is called its density.

Float that Boat | OER Commons

Assessment. Students could present their findings in an oral presentation, a written report, or on a science board. Note: Consider developing a rubric for assessment of this activity. There are several resources on the Internet that describe the use of rubrics in the K-12 classroom, a few of which are highlighted here.

Float or Sink - on Butterfly Wings English

The rubric for grades 1-12 focuses on what observers should see students doing, whereas the preK-K rubric is more focused on whether the teacher is creating the conditions to make learning possible. Accordingly, the early childhood rubric looks more at teacher actions instead of independent student actions.
