What Lives In A Shell

What Lives in a Shell? By Kathleen Weidner Zoehfeld Awards: None Grades 1- 4 Summary: The book goes over what defines a shell, different types of shells, and what lives in a shell. Review: I really like how the author uses prior knowledge to explain what a shell is. The illustrations are very detailed and colorful.

What Lives in a Shell? by Kathleen Weidner Zoehfeld

A seashell or sea shell, also known simply as a shell, is a hard, protective outer layer usually created by an animal that lives in the sea. The shell is part of the body of the animal. Empty seashells are often found washed up on beaches by beachcombers. The shells are empty because the animal has died and the soft parts have been eaten by another animal or have decomposed.

Seashell - Wikipedia

A house is a home for you, a nest is a home for a bird, and a cave is a home for a bear. But for some animals a shell is a home. Snails and turtles and crabs and clams all have shells that act as their homes and protect them from harm.

What Lives in a Shell? (Let's-Read-and-Find-Out Science 1 ...

The shell is a structure which protects all or part of an animal's body. They occur in nature on both vertebrates and invertebrates. The shell functions as a shield to protect the animal according to its individual needs. While turtles are perhaps the best known examples, animals with shells also include shrimp and bivalve mollusks such as clams and snails.
