Wireshark Lab: DNS

Wireshark Lab: DNS PART 1 1.Run nslookup to obtain the IP address of a Web server in Asia. I performed nslookup for www.rediff.com Screenshot taken after question 1 2. Run nslookup to determine the authoritative DNS servers for a university in Europe. I performed nslookup for a European University in Ioannina Greece

Wireshark Lab: DNS

Wireshark makes DNS packets easy to find in a traffic capture. The built-in dns filter in Wireshark shows only DNS protocol traffic. Also, as shown below, DNS traffic is shown in a light blue in Wireshark by default. DNS is a bit of an unusual protocol in that it can run on several different lower-level protocols.

Wireshark will resolve ip addresses to hostnames when the capture file contains DNS traffic or when you have a hosts file in your profile that maps ip addresses to hostnames. You can also 'Use an external name resolver' to resolve the IP addresses using your DNS when you open the trace file.

Can Wireshark automatically resolve the IP address into ...

The traces in this zip file were collected by Wireshark running on one of the author's computers, while performing the steps indicated in the Wireshark lab. Once you have downloaded the trace, you can load it into Wireshark and view the trace using the File pull down menu, choosing Open, and then selecting the dns-ethereal-trace-1 trace file.

Wireshark DNS v6 - University of Tennessee at Chattanooga

While it's true what @Jaap says regarding the screenshot, I'll to make an assumption. The size of the frames and the uniform length pattern (44, 80, 84) does not match a typical DNS query/answer. So I guess that's traffic where Wireshark only believes it could be DNS, based on the protocol and port (TCP/UDP 53), but in reality it's something totally different, hence the "Malformed Packet".

Why am I seeing malformed packets on my ... - Wireshark Q&A

Answer: According to the screenshot below, the sequence number of the SYN_ACK segment sent by gaia.cs.umass.edu to the client computer in reply to the SYN is 0. The value of the acknowledgement field in the SYN_ACK segment is determined by the server gaia.cs.umass.edu. The server adds 1 to the initial sequence number of the SYN segment from the client computer.
